The screenshot displays the PLC Simulator Online interface. On the left, a variable table is shown:

Name	Type	Value
start	Bool	True
stop	Bool	False
motor	Bool	True

The main workspace shows a ladder logic diagram with two rungs. The first rung contains a normally open contact labeled 'start' connected to a coil labeled 'motor' with an 'S' (Set) symbol. The second rung contains a normally open contact labeled 'stop' connected to a coil labeled 'motor' with an 'R' (Reset) symbol. A toolbar at the top provides various logic symbols and navigation tools. The bottom status bar shows the Windows taskbar with the system tray displaying the date and time as 6/8/2564 (Buddhist Era) at 15:25.
